
HP Scanner issue (Windows 7) - HP Support Community

Download

A: Open the printer software on the other computer. Select Scanner Actions, click Manage Scan to Computer, and then select the printer connected to the computer. Open the printer software on the computer you want to scan to. Select Scanner Actions, click Manage Scan to Computer, and then select the printer connected to the computer.

Jan 17, 2018 When I open a printer in the HP Printer assistant, then select "options" there are no options to scan a document as I have read in several posts. Thank you and thank you for your help. Dec 22, 2016 I am trying to scan documents from the printer on my computer. When I try to do this I am not able to select a scan option (1 and 2) and when I select the 'Scan to Computer' option it does not work. I am trying to scan documents on my computer from my HP LaserJet P1102W, using a local scanner (My USB fax module does not work). I am trying to scan a PDF of an instruction manual in the 'Scan to Computer' option. . When I go to the 'Options' tab and click on 'Scan a document' then I select 'Scan to Computer'. I can then see an option to 'Scan to Computer' on the right hand side of the window. The window when I select 'Scan to Computer' is still not. Nov 15, 2016 I am on Windows 10 and have an HP LaserJet P1102W. When I try to print to my printer using the HP Software it will not print. It will print on the computer but nothing comes out on the paper. I have tried to reset the printer driver and the printer on the computer. I have also tried printing it in Chrome and Firefox. It will print nothing but the computer is still printing something. When I go to other devices on the computer nothing is coming out either. I have not tried other apps. If I put a print on the printer will it not print anything or will the computer stop printing. If I open the printer properties and go to the 'options' tab it will not scan to a printer. I am also using the printer on the computer and when I right click on the printer in the printer properties to see if any are available and click on the settings it says no devices available. If I do a complete shutdown and restart of the printer I can use it again but I cannot seem to use it again when I only have to restart the computer. .
